

## THE GENE VISION RANGE OF VISUALISERS PROVIDE HIGH-QUALITY DISPLAY FOR PRESENTATIONS, EDUCATION AND TRAINING

### GENEE **vision**<sup>®</sup> 50 UHD

The Genee Vision 50 UHD is portable, lightweight and includes powerful features. Designed to work perfectly with our G-Touch range of interactive touchscreens, our visualisers enable presenters to display objects on an interactive screen, whiteboard or computer to audiences during live presentations.

The GV50 UHD (ultra high definition) model unit supports 8MP output imagery through both a snap and video, and supports 4K output. The GV 50 UHD model also supports the capture of A3 size print material.

Visualisers can capture still images, video, and when combined with software such as Genee Toolbar and Genee Spark, enable you to annotate, highlight and draw over the objects and save your annotation as an image or video file.

#### Key features and benefits

A visualiser is an extremely flexible teaching and presentation tool allowing presenters, teachers or students to display objects onto an interactive whiteboard, computer or LED touchscreen. This means 3D objects, books, worksheets, maps and text can be viewed by a large audience without the need to be copied and distributed.

The GV 50 UHD uses a high-quality 8.0 CMOS camera mounted to an arm. With a powerful zoom and focus, visualisers can be used to capture images up to an A3 size.

Features such as mirror, rotate, split screen, black and white, positive/negative, image freeze and title grab allow you to manipulate objects or text live on screen without affecting the original source. Also this model includes 2 x 3 LED light strips.

The Genee Vision range comes with our exclusive Toolbar presentation software and Video Cap for visualiser video, image & screen capture.
