

1. Connect Your Orbi Router

If you already connected your Orbi router, skip this step.

2. Place Your Orbi Satellite

If this is the first Orbi satellite you are adding to your Orbi network, follow these steps:

- Place your Orbi satellite in the middle of your house to get the best WiFi coverage.
- Connect the Orbi satellite to a power source.
The Power LED on the back of the Orbi satellite lights green. If the Power LED does not light, press the **Power On/Off** button.

2. Place Your Orbi Satellite (Continued)

If you already set up an Orbi router and satellite on your Orbi network, follow these steps:

- Place your Orbi satellite in a corner of your house that is far away from your existing Orbi router and satellite, but still within range of your Orbi router and satellite.
If your house has multiple floors, place your Orbi satellite on a different floor than your existing Orbi router and satellite.
- Connect the Orbi satellite to a power source.
The Power LED on the back of the Orbi satellite lights green. If the Power LED does not light, press the **Power On/Off** button.

3. Sync Your Orbi Satellite

- Wait about two minutes for the Orbi satellite's ring LED to light solid white.
- Press the **Sync** button on the back of your Orbi satellite, and within two minutes, press the **Sync** button on the back of your Orbi router.

The Orbi satellite's ring LED lights white, then lights one of the following colors for about three minutes and then turns off:

- Blue**
The Orbi router and satellite successfully synced, and the connection between the router and satellite is good.
- Amber**
The Orbi router and satellite successfully synced, and the connection between the router and satellite is fair. Consider moving the Orbi satellite closer to the Orbi router.
- Magenta**
The Orbi router and satellite failed to sync. Move the satellite closer to the router and try again.
