

## P-HOLD

The innovative, antibacterial door handle cover!

**A virus on a single door handle can spread throughout a building in just a few hours!**

These are the findings of a study by microbiologist Charles Gerba from University of Arizona. This highlights why it's more important than ever to take proactive steps to reduce the risk of cross-contamination from touch points.

Introducing the P-Hold, an innovative, self-cleaning door handle cover. Easily installed onto pull door handles, it simply "snaps" into place.

The P-Hold handle kills 99.9% of bacteria\* using silver ion technology to combat pathogens deposited onto the surface by users and then works continuously, 24/7. This prevents cross-contamination between one user and another - protecting users and reducing the spread of infections.

- Kills 99.9% of bacteria\* using silver ion technology.
- Can be fitted in less than 30 seconds to any pull door and requires no tools or experience.
- The action lasts for 6 months, with visual indicator to inform staff of when to change.
- Extremely robust and sturdy.
- Available in 2 colours – Ice Blue, Black.
- Will fit any cylindrical pull door handle with a diameter of 19mm, 20mm or 22mm (these are the 3 most common in the UK)

\* Independently tested to ISO 22196.
