

# Tilde Pro Premium

Premium ANC Office Headset

Tilde Pro Premium ANC office headset for the best noise-free communication and calls.

The patented active noise-cancelling technology (ANC) offers noise cancelling up to -30dB for noise-free communication and calls in loud environments.

Headphones with active noise canceling are headphones that reduce unwanted ambient noise. This differs from passive headphones, which, when they reduce ambient noise at all, use techniques such as sound isolation.

To cancel the lower frequencies of noise like human voices of your colleagues, noise-canceling headphones use active noise canceling. They include microphones that measure the ambient noise, generate a waveform that is exactly the negative of the ambient noise and mix it with any audio signal the listener desires. Noise Cancelling Headphones specify the amount of noise they can cancel in terms of decibels.

## Calling comfortably in a noisy environment

Do you phone frequently (in an environment with noisy colleagues), in a reception, call center or such another environment? The Tilde Pro can help you make this more comfortable.

With the Tilde Pro you can make noise-free phone calls and eliminate distractions to your own preferences. The standard on-ear or optional over-ear earpads are comfortable, easy removable and interchangeable. Also the microphone you can easily take off. Tilde Pro ensures clear and comfortable communications with your clients!

## Tilde Pro's benefits..

### Noise-free calls

The boom microphone on the Tilde Pro ensure crystal clear calls, even in noisy spaces, because of the 3 incorporated microphones. The conversation is totally noise-free on both ends of the line. This ensures confidential calls for you and the person you're calling with.

### Suppress noise

Enjoy the most natural noise reduction while you choose how much ambient noises you want to let in. You can eliminate distractions up to -30 dB with a simple press on a button. Would you rather not be isolated? It's easy to gradually reconnect to your surroundings.

### Collaborate easily

Tilde Pro uses a unique signal processing algorithm that separates voice from noise. With one press you start a face-to-face conversation while ambient noises stay turned down. Enjoy headphones that let you connect to your surroundings whenever you need to.

### Lower your voice

Tilde Pro is able to filter ambient noise. Because you are no longer bothered by ambient noise, you don't have to speak loudly and the volume in the room will automatically drop. Your colleagues and the person you're calling with are less affected by ambient noise.

### Detachable microphone

The Tilde Pro has a high quality, detachable boom-microphone. If necessary, you can easily detach the microphone thanks to the patented magnetic attach system.

### Interchange earpads

The earpads are removable, interchangeable and available separately. This means you can use one Tilde Pro within a team of multiple employees with each their favorite comfort over-earpads (for maximum comfort) or on-earpads (enhancing lightness and mobility).

## Knowledge Center

The open-place office has become commonplace in the modern office environment. Similarly, flexible working is another trend that we all (must) accept. No assigned workspaces, but all seated together in an open area.

That poses some unique challenges. Where can you go when you have to ...
