

Acorn Bin Liners - Re-usable Clear Recycling Bin Liners

‘Big Bin’ Liner Code: NW142966

‘Green Bin’ Liner Code: NW33002

We have chosen to manufacture re-usable Bin Liners because 'Biodegradable' liners cannot be recycled and are eventually destined for landfill.

Our ‘reusable’ Recycling Bin Liners are manufactured from ‘Virgin’ Polythene. This creates a lower carbon footprint than manufacturing a liner containing recycled material.

By using ‘Virgin’ material we can maintain an accurate and consistent degree of strength in the bin liners.

Bin Liners which contain ‘regrind’ (recycled/filler) need to be ‘over-engineered’ to overcome the fluctuations in poor quality (regrind) material that is used in the ‘batch’.

Polythene is made from Ethylene, which is a waste ‘by product’ of refining petrol.

No barrels of oil are used specifically to produce Polythene

Around 40% more carbon is produced in manufacturing a Recycled Liner over a Virgin Polythene Bin Liner

‘Virgin Polythene’ is a high quality re-usable material which can be easily recycled
